

Skytanking counts on Mabanol Lubricants

Mabanol Lubricants contribute to the aircraft refuelling services on a number of airports where Skytanking caters for the needs of their customers.

Christoph Lindke, Skytanking:

“It is of paramount importance to our business to provide punctuality, reliability and safety to the airlines which count on our refueling services.

The high performance lubricants of the Mabanol Argon Line offer excellent engine protection in all climates, most notably in winter, when cold starts coupled with driving short distances from the tank field to the aircraft severely strains the engine.

This is the reason why we count on Mabanol Lubricants.”
