

Mabanol DPF Cleaner

DPF-Additive

Application

Mabanol DPF Cleaner is an additive suitable for the regeneration and improvement of loaded diesel particulate filters. The additive is recommended for all diesel engines equipped with DPFs. The additive is particularly suited to vehicles operating predominantly in city traffic (short distance driving, stop and go).

Do not use in vehicles that already use an additive dosing system (e.g. fuel-borne catalysts).

Mabanol DPF Cleaner should be added to the fuel tank. The minimum fuel volume should be 10 litres. 300 ml are sufficient for 40 to 80 litres of diesel fuel.

To obtain an optimum result please fill into every third full fuel tank.

Properties

Mabanol DPF Cleaner ensures the reduction of the combustion temperature of the soot in the particulate filter.

The product prevents loss of power and increased fuel consumption due to clogged particulate filters.
